TITLE : IMAGE PROJECTION DEVICE

ABSTRACT : PROBLEM TO BE SOLVED: To provide an image projection device constituted so that a projector can be quickly and easily switched to the rear type and the front type and a housing space is reduced.

SOLUTION: When the using condition of the projector is switched to the rear type from the front type, an incorporated screen 7 is moved to an image forming position S1 by external force added by the unit operation of a user. By interlocking with it, a mirror 6 is automatically moved to a reflecting position M1 so as to reflect the light beam 5 of an image. Then, the beam 5 is projected in a first projecting direction T1 so that the image thereof is formed on the screen 7 set at the image forming position S1.
